Miniature angular contact ball Bearings

MONTON can produce Miniature bearings from 705 to 7008 open type and sealed type. Miniature angular contact ball bearings also known as small bearings or micro contact ball bearings are designed to operate in applications that require precision. Miniature angular contact ball bearings fall between 3mm diameter spindle bearings (3 to 25mm) and single row angular contact bearings with a nominal contact angle of 15° or 25°. They can be subjected to both radial and (in one direction) axial loads. The direction of the axial load is towards the outer ring. Miniature spindle ball bearings are suitable for applications requiring precision while carrying high load combined with high speed.

Miniature bearings are used in many applications, such as Linear transmission equipment, Machine tool work piece sharp and grinding wheel shaft, High speed electric shaft (wood carving, stone carving, Servo motor, drone, automatic production line, 5G base station small fan, motor Control probe Precision Measuring Instruments 3D Printer ,Aerospace etc.

Miniature angular contact bearings are critical components in high-speed and high-precision applications. Their design and working principles enable them to handle both axial and radial loads. they have excellent performance characteristics in harsh environments.

The choice of material and design of the bearing determine the load capacity and speed rating of the bearing. With their small size and high load capacity, miniature angular contact bearings play a significant role in many industrial and medical applications.
